```java
import java.util.Scanner;
public class MovieDemo
{
    public static void main(String[] args)
    {
        Movie a = new Movie();

        Scanner keyboard = new Scanner(System.in);

        System.out.println("Please enter Movie\'s name");
        String Name = keyboard.nextLine();
        a.setMoviename(Name);

        System.out.println("Please enter Movie's High rate");
        String Rate = keyboard.nextLine();
        a.setHighRate(Rate);

        System.out.println( "Please enter Movie's normal rate");
        String Rate2 = keyboard.nextLine();;
        a.setNormalRate(Rate2);

        System.out.println("Movie name: "+a.getMoviename());
        System.out.println("Movie's High rate: "+a.getHighRate());
        System.out.println("Movie's normal rate: "+a.getNormalRate());

    }
}
```
